

Pool Safety Net

Safety around swimming pools is a major concern, especially for residential sites where children and pets have access. DAYLIFF safety nets address this problem. The simple, easy to install system provides peace of mind to pool owners and operators.

The mesh net is made of strong UV stabilised nylon cord with an 8cm mesh size and is retained by anchor hooks around the pool edge. This simple arrangement is suitable for all pool shapes and provides for easy fixing and removal. Included in the installation kit are floats and a central tensioning system that maintains the net suspension from the water.

DAYLIFF safety nets are simple and effective and provide excellent security in all installations where user safety is a concern.
